

EXPERIMENT 8

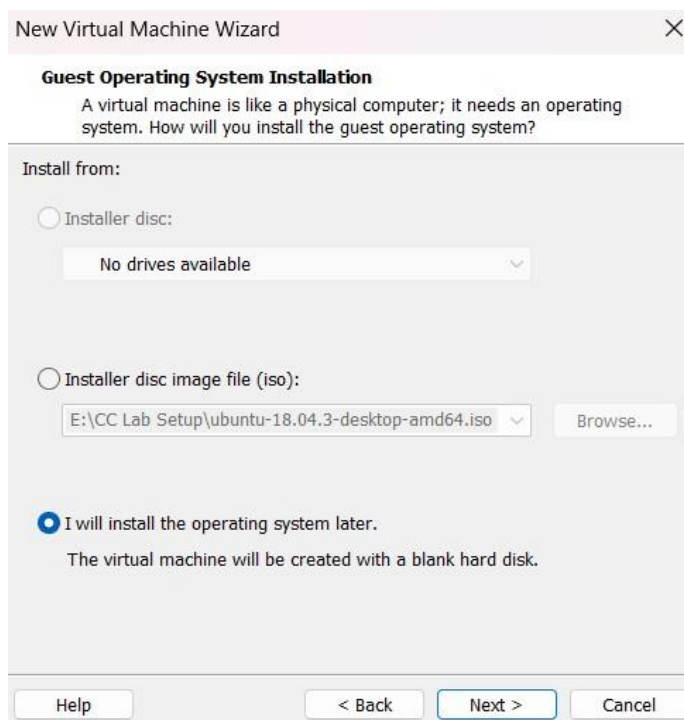

Create a Snapshot of a VM and Test it by loading the Previous Version/Cloned VM 1.click on create

2. click on next

3.select I will install the os later

New Virtual Machine Wizard

Guest Operating System Installation
A virtual machine is like a physical computer; it needs an operating system. How will you install the guest operating system?

Install from:

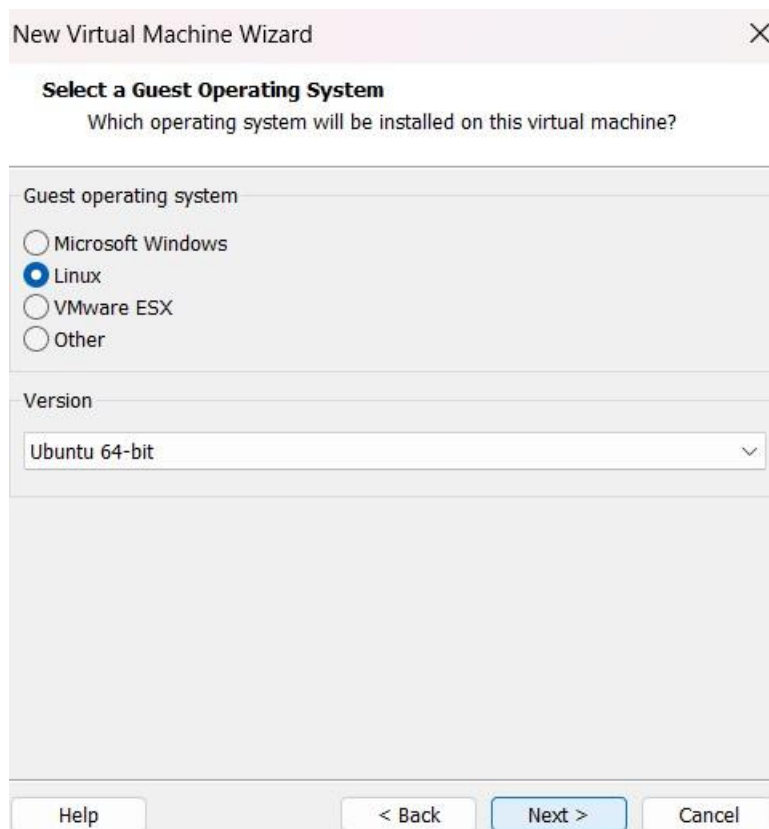

☐ Installer disc:
No drives available

☐ Installer disc image file (iso):
E:\CC Lab Setup\ubuntu-18.04.3-desktop-amd64.iso Browse...

☒ I will install the operating system later.
The virtual machine will be created with a blank hard disk.

Help < Back Next > Cancel

4.select any operating system

New Virtual Machine Wizard

Select a Guest Operating System
Which operating system will be installed on this virtual machine?

Guest operating system

☐ Microsoft Windows
☒ Linux
☐ VMware ESX
☐ Other

Version
Ubuntu 64-bit

Help < Back Next > Cancel

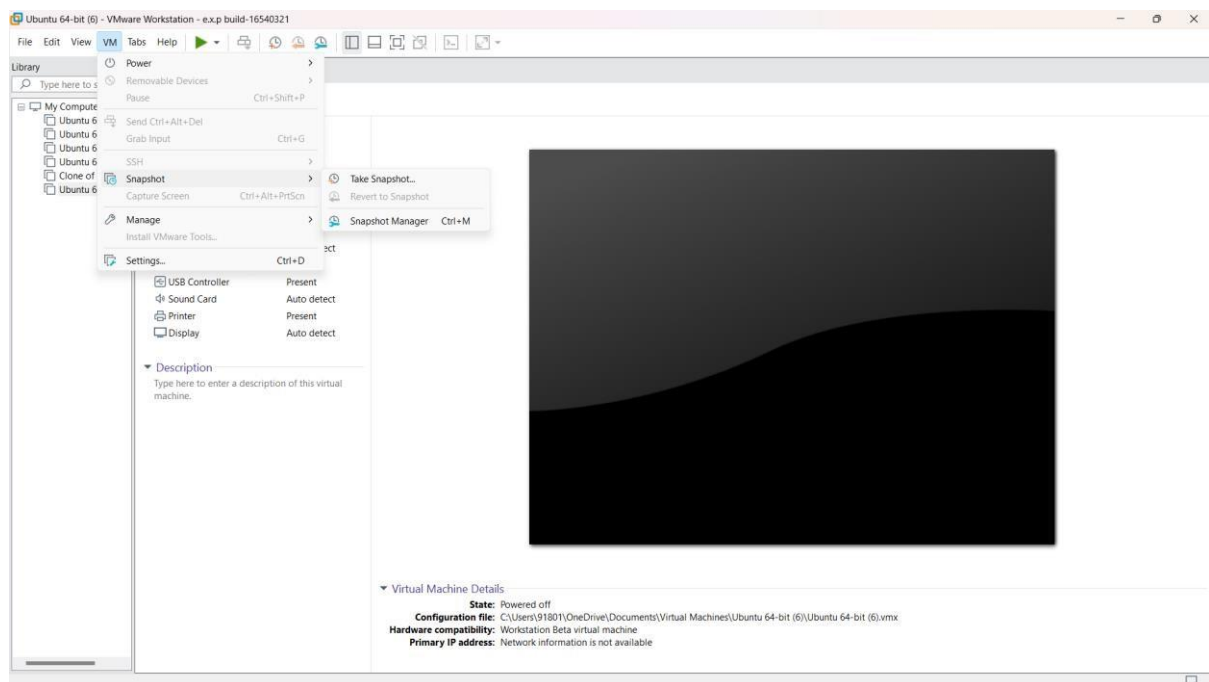

5.click on next

The screenshot shows the 'New Virtual Machine Wizard' dialog box. The title bar says 'New Virtual Machine Wizard' with a close button. The main heading is 'Name the Virtual Machine' with a subtitle 'What name would you like to use for this virtual machine?'. Below this, there is a text input field for 'Virtual machine name:' containing 'Ubuntu 64-bit (6)'. Below that is a 'Location:' section with a text input field showing 'C:\Users\91801\OneDrive\Documents\Virtual Machines\Ubuntu' and a 'Browse...' button. A note states 'The default location can be changed at Edit > Preferences.' At the bottom, there are three buttons: '< Back', 'Next >', and 'Cancel'.

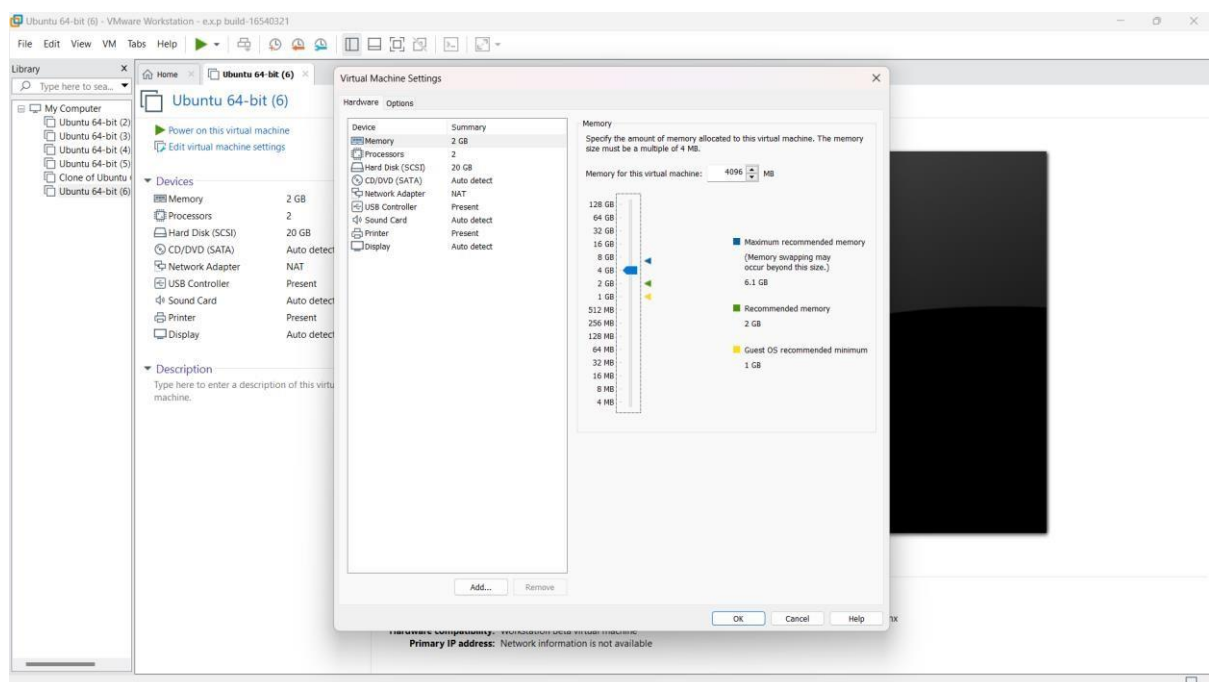

6.click on finish

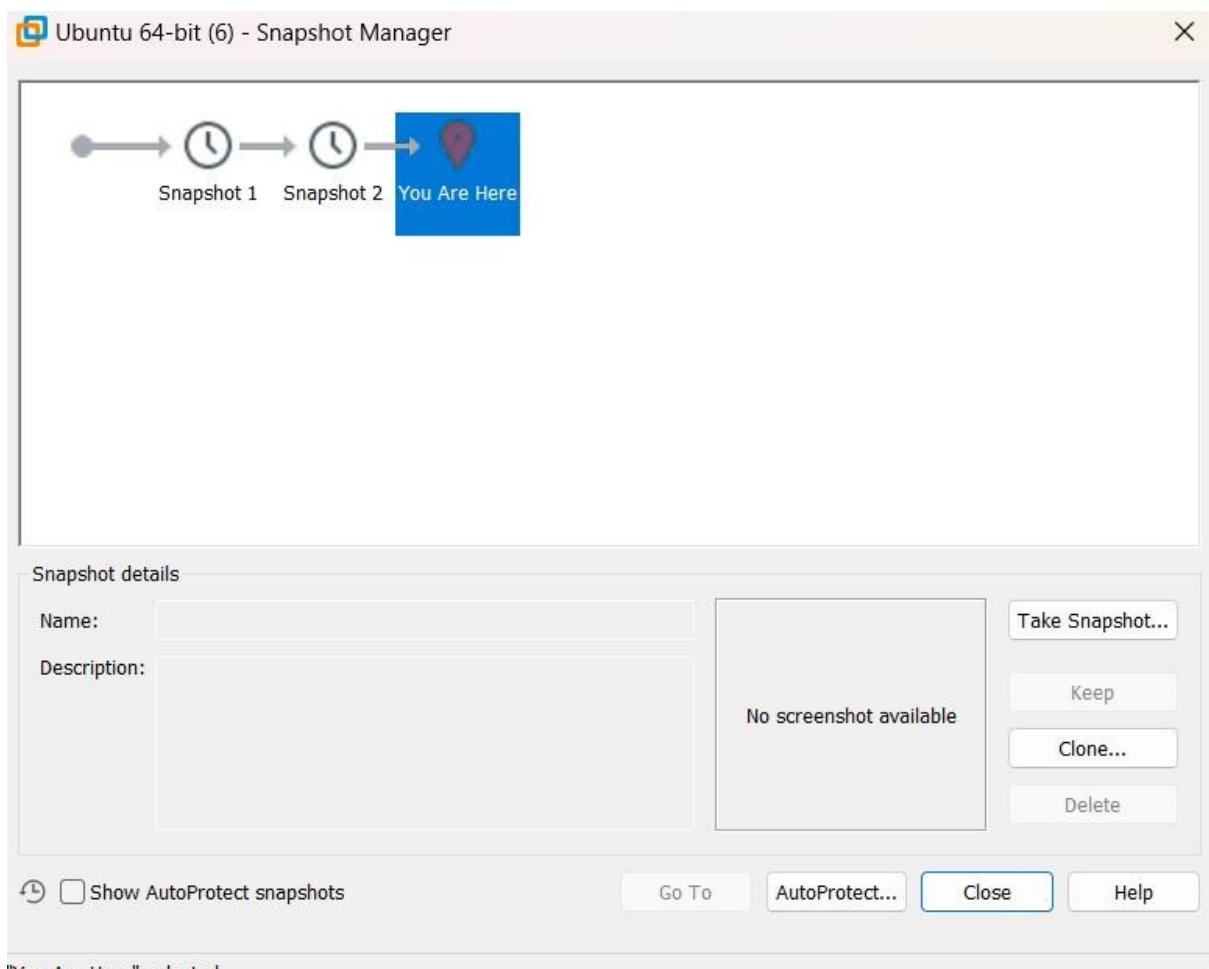

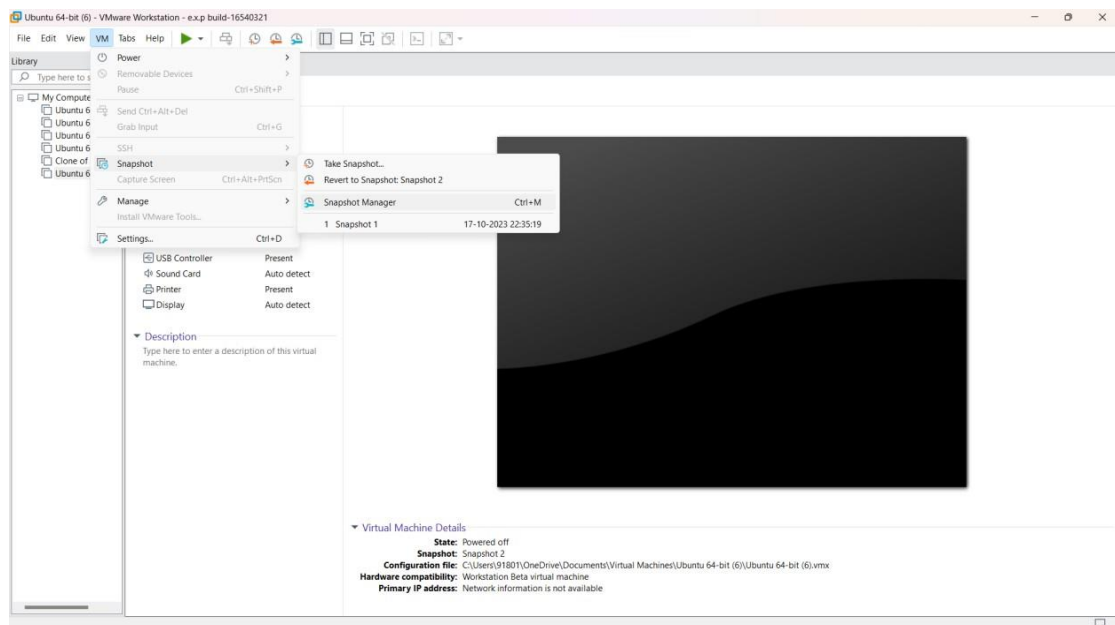

The screenshot shows the 'New Virtual Machine Wizard' dialog box at the 'Ready to Create Virtual Machine' step. The title bar says 'New Virtual Machine Wizard' with a close button. The main heading is 'Ready to Create Virtual Machine' with a subtitle 'Click Finish to create the virtual machine. Then you can install Ubuntu 64-bit.' Below this, it says 'The virtual machine will be created with the following settings:'. A table lists the settings: Name (Ubuntu 64-bit (6)), Location (C:\Users\91801\OneDrive\Documents\Virtual Machines\...), Version (Workstation Beta), Operating System (Ubuntu 64-bit), Hard Disk (20 GB), Memory (2048 MB), Network Adapter (NAT), and Other Devices (2 CPU cores, CD/DVD, USB Controller, Printer, Sound C...). Below the table is a 'Customize Hardware...' button. At the bottom, there are three buttons: '< Back', 'Finish', and 'Cancel'.

7.click on vm select snapshot and then select take snapshot

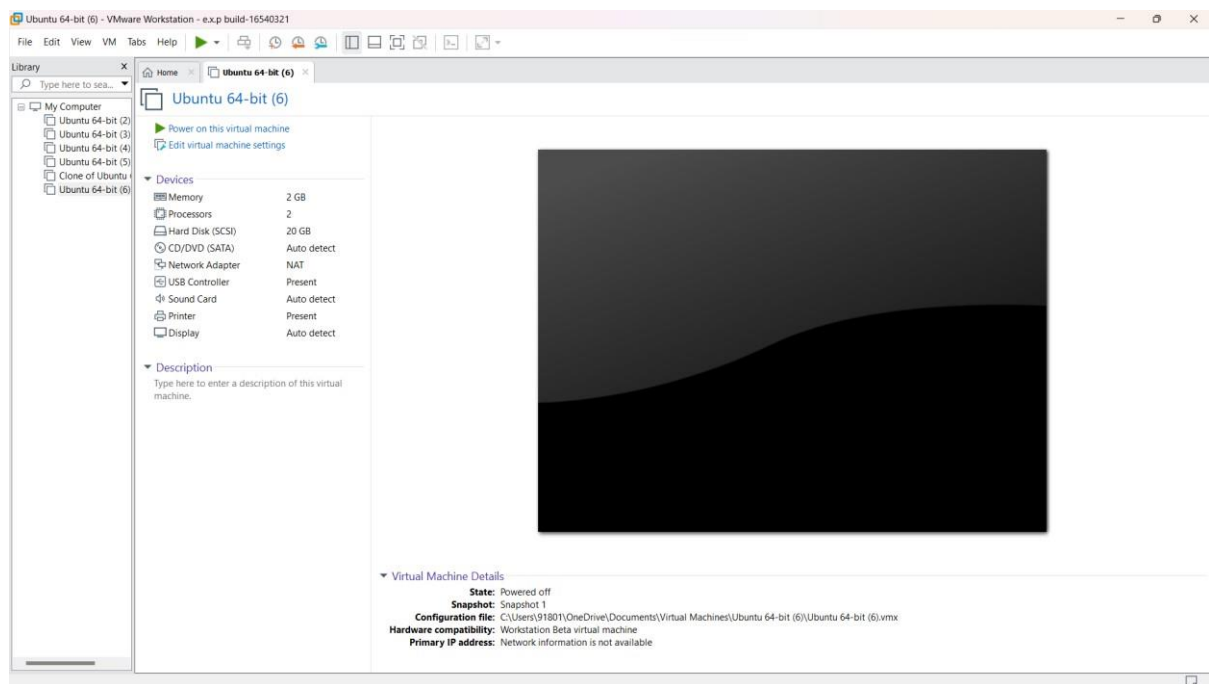

8.change memory and then take another snapshot

10.select snapshot1 and then click on goto

Then the memory changes to first its previous position
